

PRODUCT No.: 3.151

## **SATECMACONS –AAJ**

**Consolidating and anti-disgregating primer for damaged surfaces**

### **CHARACTERISTICS:**

**SATECMACONS-AAJ** is a primer based on low molecular weight and small molecule size acrylic polymers, which has been especially designed for consolidation and anti-disgregation treatments in damaged supports with different porosities.

Its small particle size allows good penetration in the supports, which makes possible the application in consolidation procedures for supports (from little porous to highly porous), being in this last type of supports where the penetration depth and also the consolidation depth, is higher.

### **USES:**

**SATECMACONS-AAJ**, when applied on a support, increases cohesion, causing material consolidation, which will be deeper, the more penetration in the support.

Allows good results as anti-efflorescences.

Due to its special composition **SATECMACONS-AAJ** allows important improvements in fixing of subsequent coatings, working in these cases as adherence primer. It's not recommended its use as tightness primer.

It's especially recommended in consolidating bricks, joints, concrete, limestone and a whole range of soft natural stones.

In the mentioned application conditions, the forming of outside film is low, thus not causing strong colour change in the treated walls. Anyway, we recommend previous testing.

### **METHOD OF USE:**

It's recommended to apply diluted with water in the proportion of "1" part of **SATECMACONS –AAJ** diluted with "2" parts of water.

The application must always be done when there's no rain and temperatures are above 5 °C. The recommended method is **wet on wet** (apply the subsequent coats of product before the previous one is dry), trying to get the support very close to saturation.

It's not recommended to over-saturate the substrate in cases when it's being used as consolidating agent, in order to prevent film formation.

### **PRECAUTIONS:**

- Do not swallow
- Keep out of the reach of children.
- In case of contact with eyes, wash immediately with water and seek medical attention.

**PACKAGING:**

**SATECMACONS-AAJ** is packaged in 10, 30, 60 and 208 kg non-reusable, plastic containers.

**ADVANTAGES:**

- The product can be diluted with water
- High consolidation and anti-disgregating power
- Can be applied on a wide range of surfaces
- Can be applied on surfaces with very different porosities.
